

Comfortable and Safety: Fork of a Road

By SeongBin Lee

Technology is rapidly developing. Think about the past. We were using phones that were used just for telephonic communication or SMS. Even taking pictures with phone was considered as new technology. Computers were used for searching information and sending emails, and computer games were mostly made with 8-bit pixels and lines. Development in agricultural tools enabled humans to gather copious amount of farm crops, which allowed most people to go to bed with a filled

stomach. Such as these developments made our lives efficient and fruitful. However, these developments are bringing new problems that were none existent before.

The biggest problem humanity is facing yet, is the development of modern weapons. From the beginning of human history, humans have made weapons to protect themselves and to hunt down animals in order to gain food. These weapons were so inefficient that they could not effectively harm anyone. There were no unintended civilian casualties, and no massive destruction.

Time passed by, and two superpowers were left. Soviet Union and the United States of America. The Cold War forced the two nations to build nuclear bombs, which possesses the potential to wipe out the whole entire Earth.. Although both nations stated that these weapons were to be used for self-defense, these weapons still remain a threat in our lives. "This is a question of strategic security. Such measures can make the world more dangerous." said Dmitri Peskov, the spokesman of Kremlin, replying to the Donald Trump's threat to quit the intermediate Nuclear Forces Treaty at October 20th, accusing Russia of violating it.

Not only weapons but also human rights that are threatened in the internet is also becoming another big problem. Internet is free and is usable to anyone.. However, internet is rising as new problem. Good examples of these severe internet censorship are China, Russia, Saudi Arabia, Democratic People of Korea, and so on... Their internet censorship hinders people's right to know. internet regulator of Cyber Administration of China mentioned that it had shut down or revoked the licenses of more than 3,000 websites.

Although these problems are getting attention, solving is still challenging. Therefore, it is important to acknowledge that there are still threats remaining in both cyberspace and real world, and it should be solved to make better society for us and our future generation.

By HyeonJun Kim

As Western Europe's economy has grown rapidly throughout the years, people's income and their life quality changed in a prosperous way. However, the poor's life has not changed much from the past. In 1980, the minorities in Western Europe earns about ten percent of share of national income, and the majority of people occupied about twenty-three percent of national income. Although the bottom fifty percent of people's share of national income decreased, it still possesses twenty-two percent of national income.

The income inequality of experienced and inexperienced workers is also significant. The inexperienced workers in Western Europe have maintained an average annual income of \$11000. On the other hand, experienced workers in Western Europe have achieved average annual income of \$50000. We can see that the incomes of the both groups differ by significant amount. This is because experienced workers are more capable of finishing their assigned works in shorter amount of time, which in result, make them more likely to keep their jobs than those who are inexperienced. It is also true that inexperienced workers are likely not to keep up their careers due to increasing privatization, downsizing, and outsourcing.

Income inequality brought severe educational problems in Western Europe. Compulsory education continues until he or she reaches the age of fourteen; fifteen in Austria, Greece, and Portugal; and sixteen in most other countries. In Spain, 51.5 percent of men and 69.8 percent of women graduate high school. In Italy, only 27.8 percent of men and 41.9 percent of women graduate high school. Also, the average amount of tuition fee and living costs in Denmark is about \$30,000, which is too expensive for lower-class people to afford.

Meet Your Secretary General and Deputy Secretary General

Secretary General

What was the difficulty in preparing TIANMUN VI?

The most difficult thing for me was making sure that all the tasks are completed on time. Because I was in charge of so many different things, it was sometimes hard for me to make sure all the individual tasks are done in time and done completely. So, staying organized and finishing all of them were most difficult for me.

What do you think about this year's TIANMUN theme which is The Dual Nature of Technology?

I feel like the theme really reflects our current society well because the world we are living now is even so-called technological era. Technology has allowed us to make a lot of achievements but at the same time, because there are dangers and threats that come along with technology, I think it is really important to utilize them wisely. This is especially because technology is becoming even more integral part of our life.

What do you expect from delegates about this year's TIANMUN conferences?

I want delegates to have fun and use this as an opportunity to learn and make new friends. Delegates, I want you to participate and then just come out of your comfort zone. Have fun in TIANMUN :)

Deputy Secretary General

What was the difficulty in preparing TIANMUN VI?

I found the most difficult part was trying to match and communicate with other directors because it was hard to communicate time by time with the directors in a certain time. We couldn't finish the work at the right time that we wanted to and also there were sometimes some kind of miscommunications going on in email. Those kinds of things were challenging to us.

What do you think about this year's TIANMUN theme which is The Dual Nature of Technology?

I think that dual nature of technology is a very important theme that we should go on for this MUN. Currently the forth industrial revolution is going on and the technological- is really in a fast pace. All those automatic cars and artificial intelligence (AI). They are really developing in a fast pace. So, I think that not only thinking about beneficial part, but also thinking about what will happen if we just neglect the disadvantages that might happen, those parts are things that MUN should go through and make equal knowledge.

What do you expect from delegates about this year's TIANMUN conferences?

I want to say that the delegates should have confidence. There are some delegates who are very intimidated and very nervous about what they should speak about. Sometimes they think that they have not enough knowledge to show to other people. But I think that's not a problem. They should have confidence, share what they have, and provide all the knowledge that they have right now to all the delegates. I think that's the most important thing that delegates should do in TIANMUN.

“DAILY REPORT”

“ADVISORY PANEL”

By SeongBin Lee

Advisors of Advisory Panel successfully submitted their beautiful solution to the tech team, readying for their fruitful debate. Advisors who earned the honorable seat of main submitters are Sweden, Egypt, Indonesia, and France. There were some groups who submitted feasible solutions. Advisors who wrote the solution for combatting cyber terrorism on government database mainly focused on cooperation with member nations and organizations, enforcing relevant legislation and security systems, and raising awareness. Advisors who submitted measures to suppress international hacktivist groups tended to put a focus on enforcing former security protocols, continuous supervising upon suspicious activities, and raising public interest. Hoping every solution for the better world passes, please do not hesitate to contribute to these solutions.

“DISARMAMENT COMMISSION”

By SeongHwan Lee

In the Disarmament Commission, delegates strived to suggest good solutions for four main cases: Measures to Regulate the Production of 3D Printed Firearms, Measures to Suppress International Cyber Espionage, Measures to Safely Develop and Implement Drone Technologies, and Measures to Prevent Nations from misusing chemical weapons on civilians. Among four topics, preventing the misuse of chemical weapons on civilian appeared to be the most eminent topic. There were two groups of delegates trying to propose solutions to this problem, and both of them were focusing on OPCW (Organization for the Prohibition of Chemical Weapons) and CWC (Chemical Weapons Convention). The overall atmosphere in the room was fine without any over-reacting to one's speech, but intense debate was still going on.

“ECOSOC”

By SuYeon Jang

On tense Friday afternoon, the delegates of the Economic and Social Council gathered to address all the risks to technological development and find a practicable solution to make sure that no one is left behind in a period of swift technological change. This year in TIANMUN, the delegates of the Economic and Social Council were very passionate to provide resolutions concerning global digital inequality between LEDC and MEDC, technological unemployment, illegal conducts of virtual currency, and the usage of artificial intelligence. Majority of ECOSOC delegates were focusing on the measures to solve technological unemployment, with sensational clauses such as setting ten years of interest rates differently to three types of countries in order to regulate the GDP or incentivizing companies to provide retraining to employees that would be replaced by technology. Despite hitting roadblocks on the way towards reaching a resolution, the delegates enabled them to collaborate and come up with numerous clauses that will provide a feasible solution to the concerns addressed above.

“HUMAN RIGHTS COUNCIL”

By SuYeon Jang

As globalization continues, many countries face increases in inequalities. The Human Rights Council concerns itself with problems related to social affairs and human rights issues, and the delegates have gathered to voice their opinions regarding the issue of preventing further corruptions. In TIANMUN VI's Human Rights Council debate, they attempted to draft resolutions on four main affairs which are all related to technology advance: combating online human trafficking, restricting internet censorship to ensure the right to access information, eliminating online harassment, and terminating child labor in LEDC. The most popular topic discussed in HRC was about terminating child labor. Without terminating child labor, these children would not be able to break free from poverty nor receive a proper education. Thus, the delegates have provided numerous measures to wind up child labor, and one of the most significant clauses was to require companies to implement reliable age checking techniques by setting an international standard. Though the delegates have faced some problems and clashing opinions, they managed to cooperate to make a thoughtful, fruitful resolution.

“GENERAL ASSEMBLY 1”

By JiMin Park

The General Assembly 1 on the issues of false information and internet terror due to the security problem convened to focus on the dual nature of technology including: dissemination of fake news, security breaches, terrorist recruitments, and significance of the peaceful exploitation of outer space. In TIANMUN VI, delegates of General Assembly 1 were open minded and passionate about those four topics, especially topic 2, “Measures to Protect Electronic Devices from Security Breaches.” Two resolutions submitted by the delegate of the United Kingdom and by the delegate of France showed several feasible solutions to provide particular remedy for security breaches. Both of those resolutions emphasize each member state's security awareness including the cause of data leakage and the use of technological safeguards. In addition, they draw attention to advanced security community by increasing several punishments for any kind of hacking or accessing to an unauthorized data. This committee, therefore, is highly anticipated to pass practicable solutions to promote a healthier and sound Internet culture.

“GA 2”

By HyoBeom Lee

The delegates of General Assembly 2nd committee were emphasizing the significance of social media in this quickly-changing world and applauding to the support of International Commissioner's Office, China's national Information Security Standardization Technical Committee, and National Security Agency. Delegates in the General Assembly 2nd committee were aware of the dramatic increase in hacking rate and realize that everyone is anxious about their privacy, but people do not secure their accounts usually. Some delegates proposed a peaceful resolution by following to solve this problem- school requirements to conduct lessons on the prevention of personal information leakage and consequences, recommending the social media companies to modify their system. However, other delegates strongly mentioned the importance of information leakage which leads to propose of encouragement to strengthen identification processes. Chairs and delegates had responsibility for working on this topic and everybody was aware of its hazard.

DUAL NATURE OF TECHNOLOGY “ARAB LEAGUE”

By HyoBeom Lee

On Friday afternoon, the delegates of the Arab League committee gathered and discussed the tension and conflict between Sunni and Shia. Chairs agreed to The Universal Declaration of Human Rights and emphasized its idea.

Therefore, all of the delegates acknowledged that everyone has the right to freedom of religion and to manifest religion or belief either in public or private. Delegates proposed several innovative resolutions to reduce the tension between two different religious groups. Several delegates put serious emphasis on urging all nations to try to develop peace talks among Arabian countries with representations from other nations involved in the conflict and from states that will play an intermediary role to discuss. Rather trying on domestic importance, some countries, however, highlighted the importance to foreign countries by urging all nations to work with Nongovernmental Organizations such as United Muslim Relief to raise international awareness of the seriousness of the tension and conflict between Sunni and Shia. Though the delegates faced several difficulties during these conferences, they submitted great ideas to resolve this magnificent religious problem.

to focus international

“ENV”

OCTOBER 25-27TH

By SeongHwan Lee

In the Environment Commission, delegates attempted to provide good solutions for four main cases: Measures to Mitigate the Environmental Backlash of Artificial Rain, Measures to Protect Animals Abused in Animal Testing, Measures to Reduce Excessive Usage of Plastic Products, and Measures to Resolve Air Pollution Caused by Factory Emissions. Among four topics, third and fourth topics were the two topics that were mainly being discussed. Third and fourth topics are both closely related to our lives because they talk about air-pollution and wasted plastic. So, it seems every delegate think that knowing and caring about the problem are the most important that should proceed. The overall atmosphere in the room was fine without minor delegates.

“EU”

Delegates of the European Union committee successfully merged their resolutions for solving the issues of the European Union. The main submitters of the four resolutions are Spain, Estonia, Sweden, and the Czech Republic.

Some resolutions have well suggested feasible ways to solve the problem. Resolution for mitigating the impact of Brexit and its economic backlash has suggested UK's setup of related policies, maintenance of trade conditions between UK and EU, cooperation between related organizations, and inviting other member nations that are outside EU. Another resolution has proposed solutions for ensuring the rights of immigrants without identification documents, which are having valuation period and providing a temporary two-year ID for that period, tracking trade records, enforcing securities, and asking help from NGOs and member states. Hoping a feasible solution will be made by the cooperation of delegates, please put effort for the global nation.

By SeongBin Lee

Today morning, delegates of the Security Council were able to finish their merging session and hand their work to the tech team, being prepared for the debate that will give huge change to the global world. Delegates who got the honorable place of the main submitter were China, France, Republic of Peru, and Germany. Some groups successfully made their resolution that was composed of a series of feasible solutions. Delegates who submitted the resolution for the situation in Venezuela suggested raising international awareness, halting any persecution and violent abuse, asking OHCHR to inform HRC and SC about the situation in Venezuela and so on. Another group of delegates put a focus on countering threats to international security due to cyber warfare. The proposed member nations' cooperation with organizations, establishment, and enforcement of legislation and security that are related to cybercrime, educations for member nations' citizens' security safety, and so on. Hoping these resolutions pass, please keep up the good work for the entire society.

“SPECIAL COUNCIL”

By JiMin Park

The Special Conference on the issues of media's hazards and uninformed topics convened to discuss duplicity of technology including: media's harmful influence on children, measures to regulate Genetically Modified (GM) food, the importance of copyright, and the relationship between gorilla extinction and mineral exploitation. In TIAMMUN VI, the delegates of Special Conference were cooperative and enthusiastic about all of those topics, especially for topic 2, “Measures to Regulate the Production of Genetically Modified Food.” This topic has two resolutions to specify feasible solutions. Both resolutions submitted by the delegate of Denmark and by the delegate of Philippines highlights the cooperation of all members stated to promote implementation and to help LEDC including other regions where GM food is unsupervised well. They, moreover, point out the importance of curbing the international trade of GMOs to develop countries suffering from food shortages. This committee is highly expected to pass feasible resolutions to promote wholesome technology.

“SECURITY COUNCIL”

MEET YOUR ADMINS!

“GRANT LUMAN”

- What is your personal goal for TIAMMUN VI?
I want to be helpful to administration executive leaders and to the eleven committees. Moreover, I want to learn more about MUN since this is my first time to join this valuable event.
- Why do you think admin team is important?
Admins set up the rooms such as placards and notes. Also, they help students who are new in our school to make smooth conferences.
- Are there any suggestions for next year TIAMMUN?
There should be more variety of snacks and rooms are too hot for delegates and admins.

“HIBIKI ONO”

- What is your personal goal for TIAMMUN VI?
I want to work hard as an admin and pay attention to the chairs in order to help that each committees can have smooth conferences.
- Why do you think admin team is important?
Admin team is important because the conferences will not be able to be secured without admins.
- Are there any suggestions for next year TIAMMUN?
I am satisfied with most of them, but I think rooms should be cooler.

“DAY 1”

“DAY 2”

“DAY 2 _ BASH”

TIANMUN 2018 BASH

On October 27, the second day of TIANMUN VI, “The TIANMUN Bash” was held in the auditorium at night. There were 13 teams which performed for Bash in total. This year, we had more performances using lots of musical instruments compare to those in TIANMUN V last year. Not only playing an instrument, but also performances of singing and dancing heated up the Bash’s air. Especially, Acapella of Wellington students were amazing. All of the performers were excited on the stage, as they live up to the brilliant reactions of audiences. When MinSoo Kim sang “One Fine Day,” audiences waved their phones up in the air. Lights of phones drew beautiful ocean waves, brightening up the dark. However, there were not just instruments and gentle music. Rappers filled up the air with their rhymed lyrics and strong beat. Benefit Crew team, composed of three TIS seniors dominated the stage.
